

EUROPEAN AIR TRANSPORT COMMAND

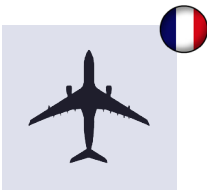

EUROPEAN AIR TO AIR REFUELLING TRAINING 2025

A SHOWCASE OF MULTINATIONAL AIR MOBILITY AND REFUELLING POWER

EART 2025 is set to take place from 17 to 31 October 2025 in Lanzarote, Spain, marking another significant step in the evolution of multinational air-to-air refueling training. Integrated with the Spanish-led Ocean Sky 2025 exercise, this edition of the European Air Refueling Training (EART) continues to enhance NATO-standard interoperability among allied air forces. Hosted on Spanish territory, EART 2025 will bring together a diverse mix of tanker and transport aircraft under the coordination of the European Air Transport Command (EATC), fostering cooperation in a strategically important southern European region. The exercise will focus on refining advanced refueling tactics, increasing mission readiness, and supporting complex multinational air operations in a realistic and dynamic training environment.

In line with EATC's broader strategic goals, EART 2025 will also contribute to innovation and sustainability through the Lighthouse Project's X-maintenance pillar, encouraging cross-national collaboration in aircraft maintenance and enhancing the resilience of deployed operations. The establishment of a Combined Air Terminal Operation (CATO) in Lanzarote will further support the exercise's logistical framework, optimizing throughput and coordination among participating nations. Building on the success of EART 2024 in Alaska, this upcoming edition reaffirms Europe's commitment to strategic mobility, operational excellence, and transnational defense cooperation—demonstrating that the strength of allied air power lies in seamless collaboration, shared expertise, and unified readiness across theaters.
